# Testing with Spring / Hands-on 3

- Write a test to check whether the endpoint "GET /pizza-orders/{id}" of the pizza order controller returns the HTTP status code 200 OK and the correct content in case of an known id.

- Change the HTTP return code of the POST endpoint to 201 CREATED and write a test for it.

- Add a method "getTotalQuantityOfOrderedPizzas" to your pizza order class to sum up the quantities of all order items. Write a unit test with assertJ (http://joel-costigliola.github.io/assertj/) for this method.

/pizza-orders
